Lab Assessment 1

Name: Sumedha Challagundla

Registration number: 23MIS0175

Course title: Agile Development Process and Devops Lab

Slot: L57+L58

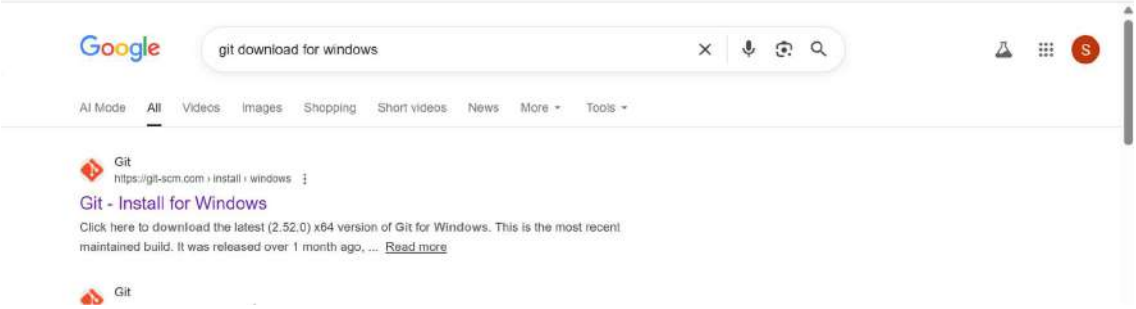
Course code: ISWE406P

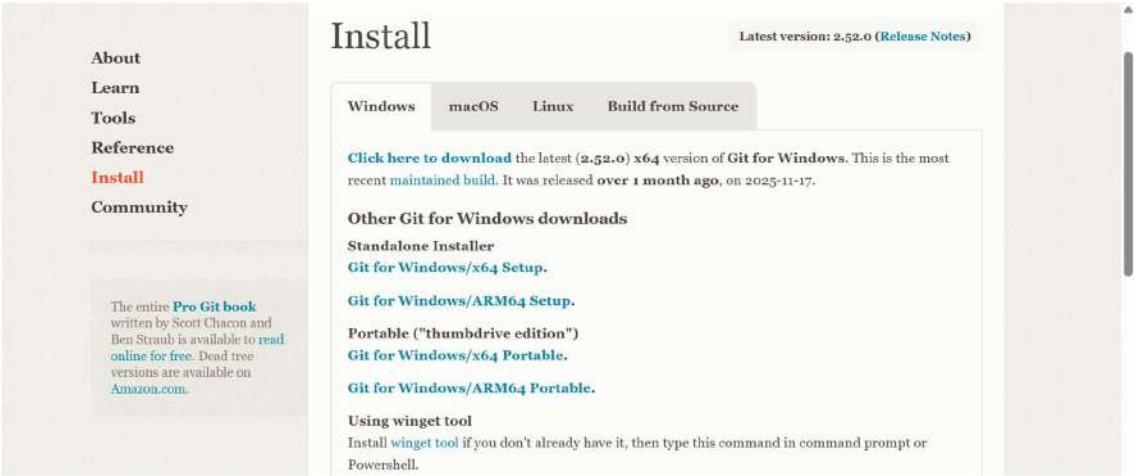
Faculty name: Dr. Ramalingam M

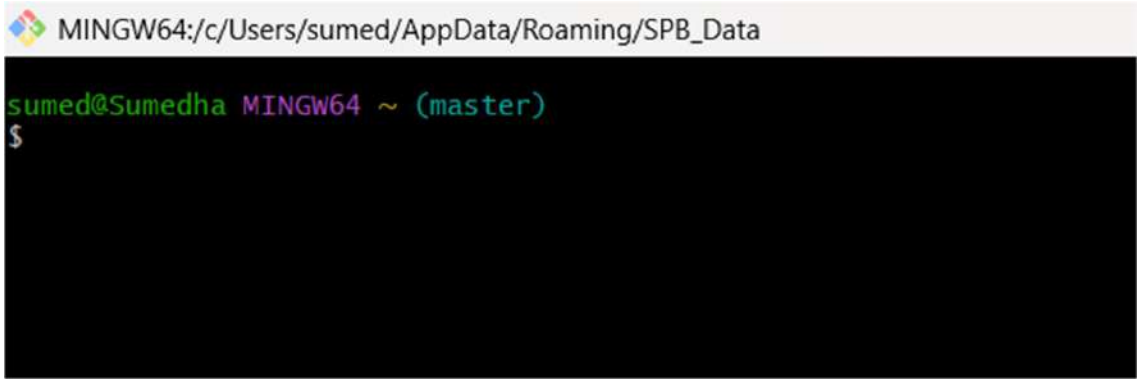
12th Dec,2025 Lab

Experiment 1: Develop a simple application (console-based or GUI-based) using any programming language of your choice. Initialize a local Git repository for the project and manage the source code using Git version control. Commit the application source code with proper commit messages and maintain version history. Create a remote repository on GitHub and push the local repository to GitHub. Verify successful hosting by accessing the repository online. Perform branch-related operations by creating at least one feature branch from the main branch, implement a minor enhancement or modification in the feature branch, commit the changes, and merge the feature branch back into the main branch. Resolve any merge conflicts if they arise and push the updated main branch to GitHub.

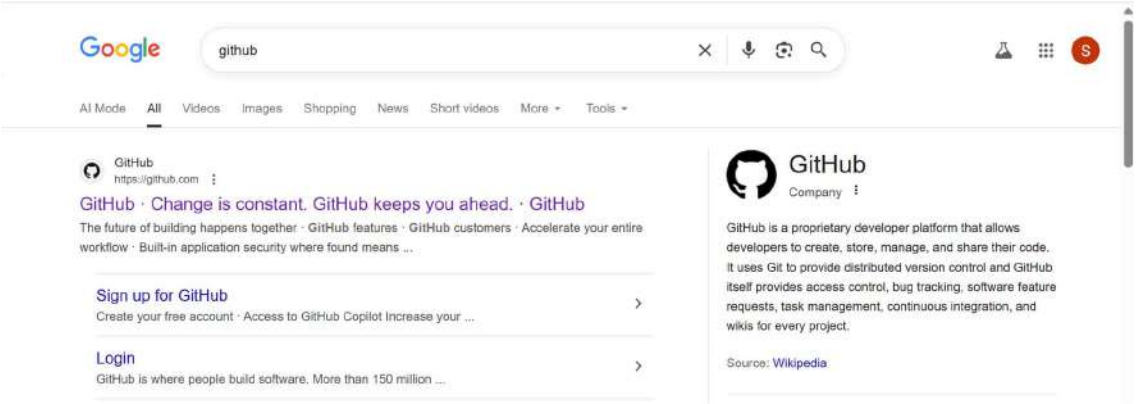
1. **Git Installation**







2. Creating Git hub Credentials



Sign in to GitHub

Username or email address

sumedhachowdary06@gmail.com

Password

Add README
READMEs can be used as longer descriptions. About READMEs

Off

Add .gitignore
.gitignore tells git which files not to track. About ignoring files

No .gitignore

Add license
Licenses explain how others can use your code. About licenses

No license

Create repository

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH https://github.com/sumedhachowdary/Calculator.git

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

```
PS C:\Users\sumed\OneDrive\Desktop\java> git init

19th Dec,2025 Lab

Experiment 2: Form a team of five members to collaboratively develop a simple application using Git and GitHub. One member shall act as the repository owner, while the remaining members shall act as collaborators. Create a shared GitHub repository and clone it to all team members' local systems. Each team member must create a separate feature branch from the main branch and modify the same source file by adding their own functionality or contribution. Each collaborator shall commit and push their changes to their respective branches and raise a pull request to the main branch. The repository owner shall review the pull requests, resolve any merge conflicts that arise due to simultaneous modification of the same file, and merge the changes into the main branch. Finally, push the updated main branch to GitHub and verify that the final application includes contributions from all five team members. Document the Git commands used and explain the collaborative workflow followed in the experiment.

Owner has created a repository "collaborative-calculator" and added addition operation

Varun03Reddy Added modulo operation

Code Blame 28 lines (24 loc) · 532 Bytes

```java
public class Calculator {

    public static int add(int a, int b) {
        return a + b;
    }

    public static void main(String[] args) {
        System.out.println("Addition: " + add(10, 5));
    }
    //collaboator 1
    public static int subtract(int a, int b) {
    return a - b;
}
//collaborator 2
public static int multiply(int a, int b) {
    return a * b;
}
//collaborator 3
public static int divide(int a, int b) {
    return a / b;
}
// collaborator 4
public static int modulo(int a, int b) {
    return a % b;
}

}
```
